

TAKE CONTROL OF YOUR HEART

- 1 in 4 Americans is at Risk for Heart Disease.
- Half will Die. *Most without prior symptoms.*

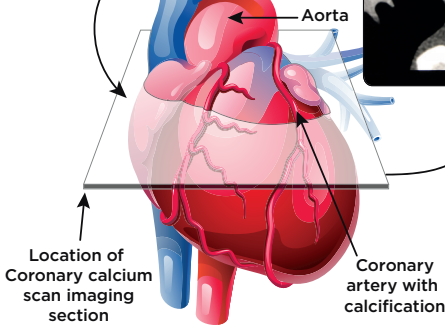

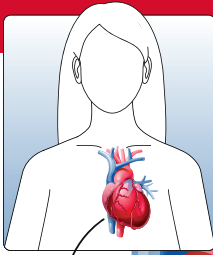

Do you have deadly calcification
in your heart arteries?

**FIND OUT IN
5 MINUTES.**

CT Coronary Calcium Scoring

CT Coronary Calcium Scoring

It's a **GOOD IDEA** to get this test if you are over 40 and have any of these risk factors:

- Heart disease in your family
- Smoke
- Overweight
- Sedentary Lifestyle
- High LDL Cholesterol
- Low HDL Cholesterol
- High blood Pressure
- Diabetes.

Your calcium score can help you make lifestyle changes needed for a long healthy life.

Your test will be interpreted by a cardiovascular physician at Healignt who is specially trained and certified by the Board of Cardiovascular Computed Tomography.

Coronary Calcification

Calcium Scoring measures the amount of calcification in the arteries around the heart. These calcifications indicate coronary atherosclerosis or so called "hardening of the arteries" which is the leading cause of death in America. The more calcification present, the higher the calcium score and the greater the likelihood of significant heart disease. A high calcium score indicates a moderate to high risk of an adverse event due to heart disease in the next 5 years.

For a limited time, this test is only \$40.
